ViGIE Airo Software

The ViGIE Airo transport data logger system from Validair offers highly accurate temperature, humidity and motion records for critical consignments. Unlike other data loggers on the market, the Airo range of transport data loggers uniquely downloads critical information automatically via RF technology in to the software, removing the need for manual intervention to retrieve data. Working in conjunction with the VMS system, both static and in-transit records can be viewed in the same software, making data interrogation and reporting simple.

Main features of the system include:

- Ultra-low power consumption – up to 10 years battery life

- 15,000 events stored in internal memory

- 100% data delivery guaranteed

- Communicate transparently (no pairing needed) with any available Airo receiver allowing you to create a wide area network very easily.

- Range of up to 100m (standard version) 600m (extended version) in open space

- Easy to clean surface - PC-ABS

- Very compact, accurate and robust wireless data logger

- Logging parameters include temperature, humidity and motion

- Indoor, outdoor and in-transit radio receivers available
